

# OneNote 2010

What does this course offer you?

In this course, you will learn what the applications available in OneNote are used for and become familiar with the structure of the new electronic notebook. You will learn how elements are created, inserted or changed in the notebook and how data can be exchanged between OneNote and other applications. The search and categories in OneNote allow you to find what you're looking for quickly. In addition, you will learn about the release option and see how easy it is to use notebooks together in a team.

The primary subject matter of the course:

## OneNote Introduction

- What is OneNote?
- The structure of a notebook
- Customizing the OneNote window

## Basic Knowledge of OneNote

- Creating a new notebook
- Working with tags
- Inserting items into the notebook
- Data input and data output in OneNote
- Sending files to OneNote
- Expanding the notebook
- Side Notes

## Restructuring the Notebook

- Restructuring pages in the notebook
- Restructuring sections in the notebook

## Advanced Knowledge of OneNote

- The notebook in conjunction with Outlook
- Searching in OneNote
- Views for notebooks
- Management and sharing
- Collaboration in notebooks

### What do you need to know in advance of this course?

This course only requires basic knowledge of working with mouse and keyboard. Knowledge of standard Office programs is also an advantage.
